

The text is called the 6 tips for preventing rust. The text is divided into seven parts. In the first part we are given a description of the process. Rust is the name ~~of~~ for the orange-brown flakes of iron oxide that form on the surface of any metal.

Water is enemy number one when it comes to rust, because it's the oxygen in water molecules that combines with iron to form iron oxide.

Dipping metal objects such as clocks, into bluing solution of water.

The zinc coating acts a barrier to prevent oxygen and water from entering the steel.

The last part describes regular maintenance.
